

Warmup's wafer thin undercarpet heater fits between the carpet and underlay.
If it wasn't for the lovely warm feeling in the room, you would never
know it had been fitted.

Undercarpet heating

sustainable heating solutions

Undercarpet heating

Unlike conventional heaters that warm one particular spot, Warmup radiant floor heating evenly distributes the warmth throughout the floor and up into the room, leaving no uncomfortable cold spots. This style of heating warms the room up faster and more effectively. The heat is directed where it is most pleasing - the feet - leaving the air we breathe slightly cooler.

As the heating solution becomes part of the floor, with no hot or moving parts, you can still enjoy an uncluttered home, as well as a maintenance-free heating system. Best of all, this clean, silent and odour-free heating solution will not dry out the air or aggravate allergies. For ultimate control and maximum energy efficiency, we recommend the use of an intelligent Warmup thermostat.

Product Range

Our undercarpet heating pads are foil based, ensuring even heat distribution.

Thanks to this technology, they are 100% waterproof, further acting as an earth shield over the internal core wire.

Built with spring like flexibility, the core wire is a durable cushion that can withstand heavy furniture, snooker tables, stiletto heels and other household items.

Warmup's heating systems are a result of more than three decades of advanced research and development. The undercarpet heating pads are designed to never overheat and can be left on continuously.

Warmup has certified installation specialists nationwide, who will be pleased to provide more details on Warmup products and services. Contact us to discuss your requirements.
